

SkillBits

Problem statement:

Millions of young people aged 16-21 are denied exposure to real-world work experience despite their desire to acquire skills.

Employers demand work experience, but young people cannot acquire experience without being given an opportunity, thus forming a vicious cycle of exclusion.

Learning institutions concentrate on theoretical knowledge acquisition, while formal apprenticeships are few and out of reach for the underprivileged.

There is no reliable mechanism to confirm work abilities other than certificates.

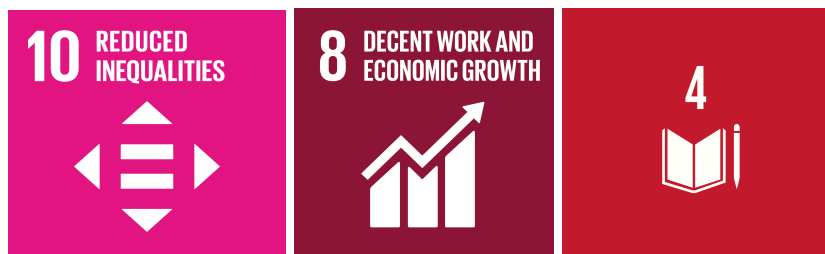

Early unemployment, skill disparities, and economic inequality result.

SDGs covered

SDG 4 – Quality Education: Enables practical, hands-on learning beyond theoretical education

SDG 8 – Decent Work & Economic Growth: Provides early earning opportunities and employability pathways

SDG 10 – Reduced Inequalities (Indirect): Offers equal work access regardless of geography or background(optional)

Proposed solution

SkillBits is a micro-apprenticeship platform that employs AI technology to offer youth aged 16-21 real industry experience through task-based learning.

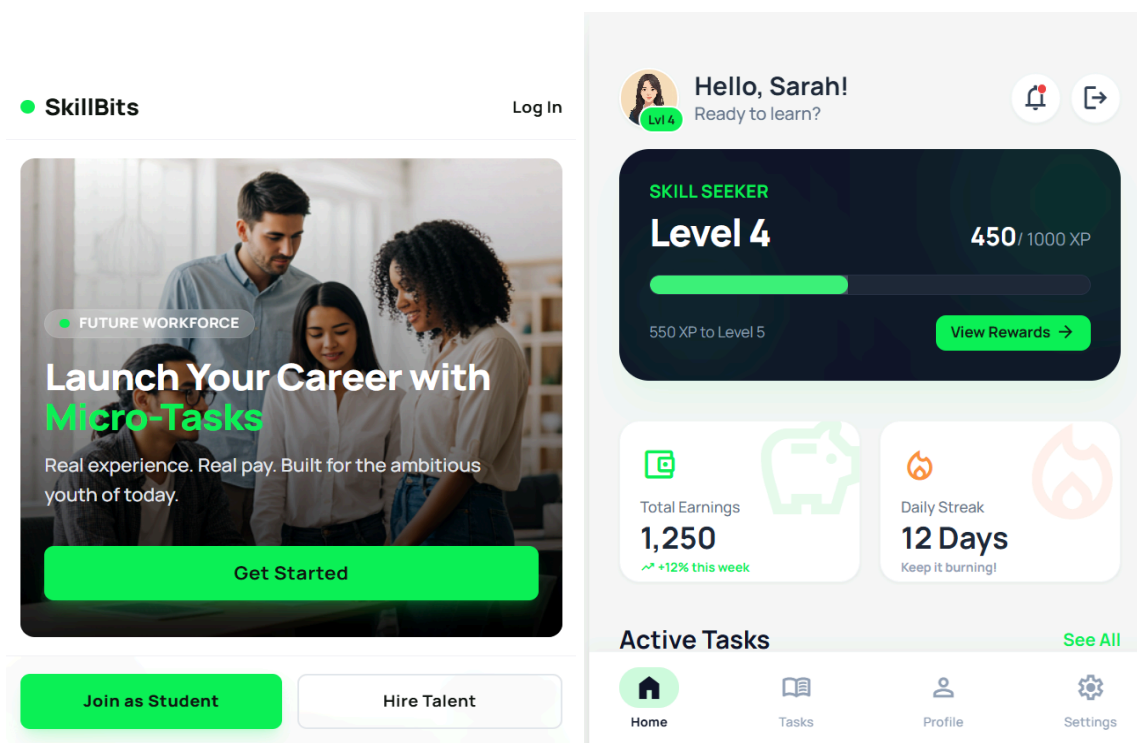

Organizations upload real work from their operations such as data tagging, research assistance, testing, documentation, and digital support, which is then broken down by the platform into micro-tasks that are beginner-friendly.

An AI mentor is integrated into the platform to walk learners through tasks step by step, providing real-time feedback and rating learners on quality, accuracy, and consistency instead of actual exams.

SkillBits grades and assigns performance points for each task completed, creating a dynamic skill score reflecting levels of competency (Beginner, Intermediate, Advanced). The higher the skill score, the more complex work is opened for continuous skill development.

Each completed module earns a verifiable digital credential that is safely stored in a "Skill Passport" for recruiters to assess candidates on actual performance records instead of resumes.

SkillBits bridges the divide between education and employment by leveraging actual work to create learning paths that promote capability hiring and fair access to early career opportunities for underserved youth.
